

PROJECT BULLETIN #2

May 2017

PROJECT UPDATE

The G21 Regional Growth Plan (G21 RGP) identified two Further Investigation Areas (FIAs) to accommodate the longer term growth of Geelong.

The Northern and Western Geelong Growth Areas Project (NWGGA) will deliver an Integrated Infrastructure Delivery Plan (IIDP) and Framework Plans for the identified FIAs.

The Project aims to establish a framework for the delivery of sustainable liveable communities in both Growth Areas.

Since the first project bulletin in May 2016, the City has been working closely with key landowner consortia for each growth area and key agencies and service authorities to deliver the outputs of phase 1 of the Project.

Phase 1 will deliver a range of technical background studies to inform the future framework planning design workshops and the preparation of the IIDP. Studies include stormwater and flooding, traffic, vegetation, aboriginal and european heritage.

It is anticipated that phase 1 will be completed by mid 2017.

NEXT STEPS

The City will continue to work with key stakeholders to finalise the phase 1 technical studies. Once completed, the studies will be consolidated into Framework Plan Background Reports for each growth area. These will be used as key reference tools leading into the phase 2 framework planning design workshops.

The City will be engaging with all landowners in each study area by holding a number of Open House sessions.

Open House session #1 in May 2017 will provide an opportunity to meet the NWGGA project team to ask questions about the project and its current status.

Open House session #2 will take place once all phase 1 technical studies have been completed. It will provide an opportunity to review the existing conditions work and understand how it will inform phase 2.

Phase 2 will provide further opportunity to engage with the project through vision and principles workshops and framework planning design workshops. The City has appointed Mesh Urban Planning to prepare the framework plans.
